

M133C Calibrator Family Performance Upgrade

Long term observation revealed M133C calibrators exhibit much better stability than original design aimed for. Internal tests proved that better accuracy can be achieved just by extending adjustment procedure.

Therefore, M133C calibrators as of serial number 557131 will come adjusted in a way to achieve better accuracy, paired with new performance upgrade allowing generation of up to 63 harmonic products and voltage output from current terminals. Such units will be marked "2021 perf. upgrade" on rear panel label. New functions and specifications are described in latest documentation (user manual version 33).

Most M133C calibrators with serial numbers up to 557121 can be upgraded and adjusted by Meatest to get the same features and specifications. This service will be offered for free with every calibration (factory or ISO17025) done in Meatest until the end of 2022. Upgraded units will be relabelled to show "2021 perf. upgrade" on rear panel label too. Contact us at meatest@meatest.com or ask your local Meatest representative to help you get your M133C upgraded.

Best regards,
Team Meatest
