

6040 Panel Meter Calibrator

FW Changelog

Version 1.003

- Unlocked Program feature and full range of compliance voltage and burden current in AC functions. Added cable compensation to compensate for cable resistance under high loads.
- Phase angle rotation in AC Power function can be reversed in MENU > Device > Power AC > Phase polarity.
- Simplified adjustment procedure for DC functions.
- Changing output polarity (in DC functions) no longer shuts the output off.
- Enhanced external voltage protection.
- Minor UIR improvements and bug fixes.

Version 1.000

- Initial FW version. Overload protection limits are intentionally set to lower levels for test purposes.
